#### EVENT DESCRIPTION:

The event at the RWTH Aachen was organized in three days with aspects of the study visit, managerial session, a session on the study program and the main focus on the development of the learning material. All sessions took place in the Generali Saal with the exception of the tours.

The study visit included an introduction of the RWTH Aachen University by the International Office and the Faculty of Architecture on the first day and a tour of the premises with information provided by Professors or scientific staff. The structure and the topics within the RWTH were explained with the explanation for the close industrial relations.

In the managerial session the coordinating institution prepared information on the intermediate progress report. The documents were presented and their fill-in was explained. The progress report is due in February 15<sup>th</sup>, including the financial forms on 5<sup>th</sup> March.

In the session for the study program each WB partners explained the status of the study program and the work they did so far.

Main focus was the development of learning material. The sessions on the first day was held as group in order to discuss the format and the procedure. Books and readers for each course were discussed. While the readers provide specific information for on course it limits the lecturer to a pre-defined structure and content. Additionally, the workload for 70 courses included in the six study programs is not sufficient. Books deliver more abstract information in relation to a specific content of a course. They enable a variety of course planning. Books fill the gap in existing literature for the topics resilience and sustainability in the built environment for the WB context. They provide applicability for all WB institutions.

The second day included working in groups according to the books. Editors explained the structure of the book and discussed potential contributions by the authors. The content for the majority of the chapters was clear and only minor adjustments were done. At the end of day two the revised structure of the books was discussed in plenum in order to detect related topics. No overlap could be found. When similar topics occurred, different scales were discussed. The sessions ended with specifications for the authors, editors and editors in chief.

The event was concluded successfully, new terms and tasks were agreed and shared among project members, and the next project meeting at the State University of Novi Pazar has been appointed for March 2017.
